

CHOPX Chopper Pump Diverter Valve and Recirculation Nozzle Assembly

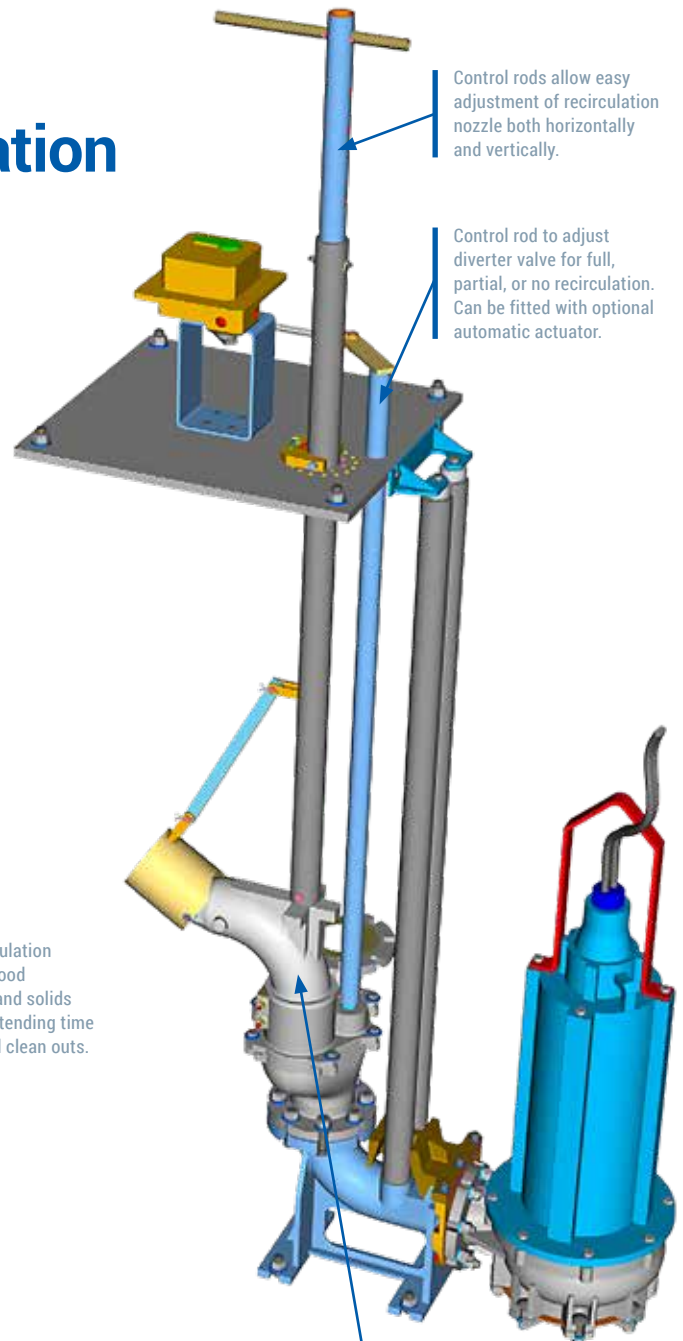

- Chop, re-circulate, mix, and pump out tanks & basins with one system
- Available with submersible or vertical ChopX pumps
- Suspend and incorporate solids prior to pump out
- Break-up and incorporate scum blankets

Adjustable recirculation nozzle ensures good scouring, scum, and solids incorporation, extending time between required clean outs.

APPLICATIONS INCLUDE:

- Scum collection pits
- Septage receiving
- Food processing sumps
- Any sump, pit, or basin where solids build-up is a problem

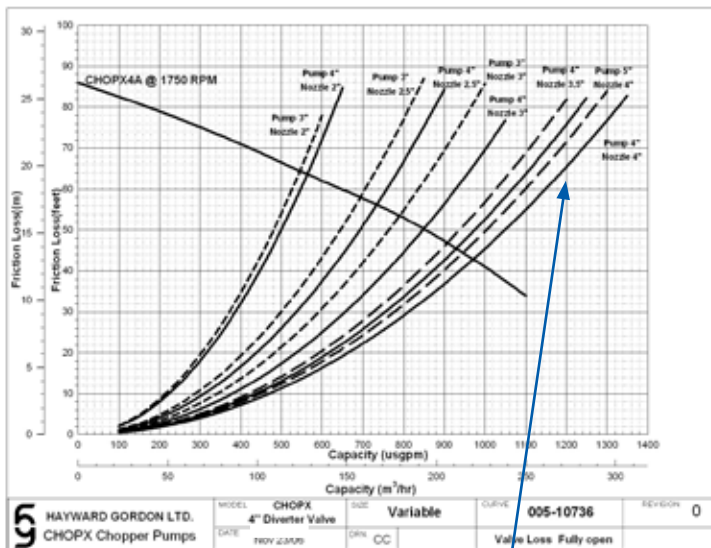

Control rods allow easy adjustment of recirculation nozzle both horizontally and vertically.

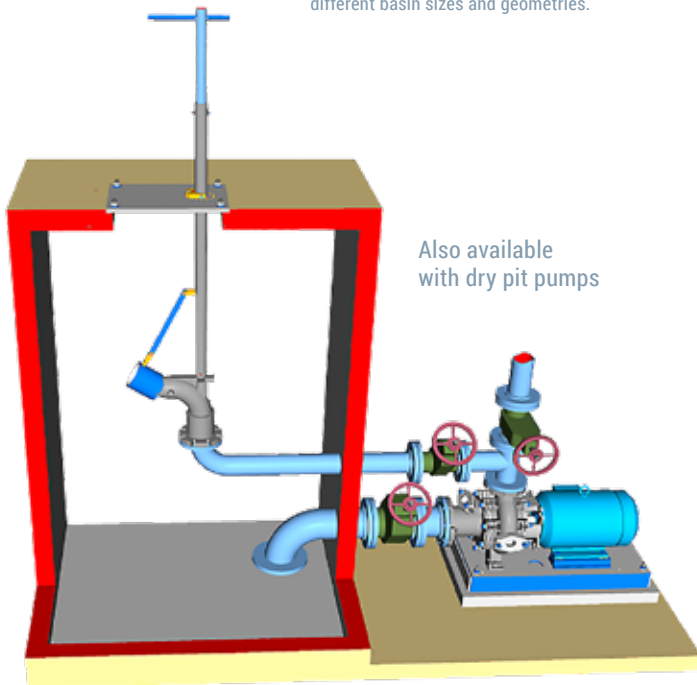

Control rod to adjust diverter valve for full, partial, or no recirculation. Can be fitted with optional automatic actuator.

Rotating nozzle is self contained in valve housing. Collars for control rods which require field setting are eliminated.

FEATURES AND BENEFITS

Trimable nozzle allows optimum flow selection for each application, i.e. mixing different basin sizes and geometries.

Also available with dry pit pumps
