1. Introduction

This data booklet deals with Grundfos CR, CRI and CRN pumps.

CR, CRI and CRN 1s-64

CR, CRN 95-255

CR pumps are vertical, multistage centrifugal pumps. The in-line design of the pumps enables installation in a horizontal one-pipe system where the inlet and outlet ports are at the same horizontal level and have the same pipe dimensions. This design results in a more compact pump.

The pumps are available in various sizes and numbers of stages to deliver the required flow rate and pressure.

CR pumps are designed for a wide range of applications, from pumping potable water to handling chemicals. They are therefore suitable for various pumping systems where the performance and materials meet specific demands.

A CR pump consists of two main components: the motor and the pump unit.

The motor is a Grundfos or Innomotics motor designed in compliance with EN standards.

The pump unit consists of optimized hydraulics, different types of connections, a sleeve, a pump head and various other parts.

CR pumps are available in various material versions according to the pumped liquid.

Typical applications

The pumps are suitable for various applications. See some typical examples listed below.

Water supply:

- Filtration and transport waterworks
- distribution from waterworks
- pressure boosting of mains.

Industrial processes:

- Pressure boosting
- process water transfer
- boiler feed
- cooling and air conditioning
- firefighting systems
- special liquids transfer.

Water treatment:

- Filtration
- brackish water reverse osmosis.

Commercial building services:

- Chilled-water systems
- hot-water systems
- pressure boosting
- boiler feed
- firefighting systems
- district energy systems.

Related information

[4. Applications](#)

Pumped liquids

The pumps are designed for non-explosive liquids that do not chemically attack the pump materials.

When pumping liquids with a density or viscosity higher than that of water, oversized motors may be required.

The suitability of a pump for a particular liquid depends on several factors, the most important being chloride content, pH-value, temperature and content of chemicals and oils.

Note that aggressive liquids may attack or dissolve the protective oxide film of the stainless steel and thus cause corrosion.

Related information

[12. List of pumped liquids](#)

TM069062

CR and CRI

These pumps are suitable for non-corrosive liquids. Use them for liquid transfer, circulation and pressure boosting of clean cold or hot water.

CRN

This pump is suitable for industrial liquids. Use it in systems where all parts in contact with the liquid must be made of high-grade stainless steel.

ErP-compliant

The product is energy-optimized and complies with the ecodesign requirements for water pumps specified in the ErP Directive, Commission Regulation (EC) No 547/2012, effective as of January 1, 2013. From that day on, all pumps are classified and rated according to the Minimum Efficiency Index (MEI).

Minimum Efficiency Index

The Minimum Efficiency Index (MEI) is the dimensionless scale unit for hydraulic pump efficiency at best efficiency point (BEP), part load (PL) and overload (OL). The Commission Regulation (EU) sets efficiency requirements to a MEI over or at 0.10 as of January 1, 2013, and a MEI over or at 0.40 as of January 1, 2015. An indicative benchmark for best-performing water pump available on the market as of January 1, 2013 is determined in the Commission Regulation.

- The benchmark for most efficient water pumps is a MEI over or at 0.70.
- The efficiency of a pump with a trimmed impeller is usually lower than that of a pump with a full impeller diameter. The trimming of the impeller adapts the pump to a fixed duty point, leading to reduced energy consumption. The Minimum Efficiency Index (MEI) is based on the full impeller diameter.
- The operation of this water pump with variable duty points may be more efficient and economic when controlled, for example, by a variable-speed drive that matches the pump duty to the system.
- Information on benchmark efficiency is available at <http://europump.eu/efficiencycharts>.

MEI values for CR pumps

2) A minimum liquid temperature of -40 °C is standard for CRN 32, 45 and 64, and is available on request for CRN 95, 125 and 155.

3) For CR, CRN 32-155, liquid temperatures up to +180 °C (oils up to 240 °C) are available on request.

4) For CR 95-155, the maximum operating pressure is 25 bar. For CRN 95-155, the maximum operating pressure is 40 bar. Note that CRN 95 pumps with motors above 55 kW and CRN 125-155 pumps with motors above 110 kW require a soft starter or frequency converter.

Note that for applications involving CIP (clean-in-place) and pumps with motors above 55 kW, you must use a bearing flange and a base when the pump is not equipped with a thrust bearing or thrust-balancing device.

5. Features and benefits

Pump

CR pumps are non-self-priming, vertical, multistage centrifugal pumps.

The pumps are available with a Grundfos or Innomotics standard motor.

The pump consists of a base and a pump head. The chamber stack and the sleeve are secured between the base and the pump head by staybolts. The base has inlet and outlet ports at the same level (in-line). All pumps are fitted with a maintenance-free, cartridge-type mechanical shaft seal.

Motor

Grundfos MG and Innomotics motors

CR, CRI and CRN pumps are fitted with totally enclosed, fan-cooled, 2-pole standard motors that comply with principal dimensions specified in EN standards.

Electrical tolerances are in accordance with EN 60034.

As standard, CR, CRI, CRN pumps are equipped with three-phase MG motors up to 18.5 kW and Innomotics motors from 22 to 200 kW.

CR, CRI, CRN pumps from 0.37 to 2.2 kW are also available with single-phase motors (1 × 220-230/240 V). See the Grundfos Product Center at <http://product-selection.grundfos.com/>.

Insulation class	F	
Efficiency class	IE4	
Enclosure class	IP55 ⁵⁾	
Supply voltage	3 × 220-230/380-400 V	P2: 0.37 - 1.5 kW
Tolerance: +/- 10 %	3 × 380-400/660-690 V	P2: 2.2 - 18.5 kW
	3 × 380-420/660-725 V	P2: 22-200 kW
Supply frequency	50 Hz	

5) IP44 and IP54 are available on request.

Grundfos E-motors

We also offer frequency-controlled CRE pumps that are ideal for applications requiring variable flow rate at constant pressure. These pumps are suitable for water supply systems, pressure boosting, and industrial applications. Depending on the application, they offer energy savings, increased comfort, and improved process efficiency.

See the CRE, CRIE, CRNE data booklet available at the Grundfos Product Center at <http://product-selection.grundfos.com/>.

Optional motors

The Grundfos standard motor range covers a wide variety of application requirements. For special applications or operating conditions, custom motor solutions are available, such as the following:

- ATEX-approved motors
- MG motors with anti-condensation heating unit
- motors with thermal protection.

Motor protection of MG and Innomotics motors

Single-phase Grundfos motors are equipped with a built-in TP 211 thermal overload switch in compliance with IEC 34-11.

Three-phase motors must be connected to a motor-protective circuit breaker according to local regulations.

Three-phase Grundfos motors as from 3 kW have a built-in PTC thermistor in accordance with DIN 44082, a TP 211 thermal overload switch complying with IEC 34-11.

Terminal box positions

As standard, the terminal box is fitted on the inlet side of the pump.

Terminal box positions

Pos.	Description
1	6-o'clock position (standard)
2	9-o'clock position
3	12-o'clock position
4	3-o'clock position

Ambient temperature

Motor power [kW]	Motor make	Motor efficiency class	Maximum ambient temperature [°C]	Maximum altitude above sea level [m]
0.37 - 0.55	MG	-	40	1000
0.75 - 18.5	MG	IE4	60	3500
22-200	Innomotics	IE4	55 ⁶⁾	2750

⁶⁾ The maximum ambient temperature for Innomotics motors operated by a frequency converter is 40 °C.

If the ambient temperature exceeds the above maximum temperatures, or the pump is installed at an altitude exceeding the above values, the motor must not be fully loaded due to risk of overheating. Overheating may result from excessive ambient temperatures or the low density, and consequently low cooling effect, of the air.

In such cases, it may be necessary to use a motor with a higher rated output.

Motor output in relation to temperature and altitude

Pos.	Motor power [kW]	Motor make
1	0.37 - 0.55	MG
2	0.75 - 18.5	MG
3	22-200	Innomotics

Viscosity

Pumping liquids with density or kinematic viscosity greater than that of water causes a considerable pressure drop, a drop in hydraulic performance and a rise in power consumption.

In such situations, the pump must be fitted with a larger motor. If in doubt, contact Grundfos.

CR, CRN 255-5-3 → 255-6-2	-	-	40	

²⁶⁾ It applies to standard configurations. For operating conditions outside the standard, contact Grundfos.

²⁷⁾ For operating pressures above 25 bar, see section about operating range of the shaft seal.

Operating range of the shaft seal

All pumps are delivered with an HQQE/V cartridge shaft seal as standard.

The operating range of the shaft seal depends on operating pressure, pump type, type of shaft seal and liquid temperature. The range of standard shaft seals applies to clean water and water with anti-freeze liquids. For selection of the right shaft seal, see the section about the list of pumped liquids. If the operating range is exceeded, the life of the shaft seal may be reduced.

When pumping demineralized water with a conductivity below 2 µS/cm using a pump equipped with a silicon carbide/silicon carbide shaft seal, there is an increased risk of electrochemical corrosion. It is recommended to use a silicon carbide/carbon or silicon carbide/tungsten carbide shaft seal instead.

Related information

Shaft seals

Ø12, Ø16 and Ø22 shaft seals

Operating range of standard shaft seals

Standard shaft seal	Motor size [kW]	Description	Liquid temperature [°C]
HQQE	0.37 - 55	O-ring (cartridge) (balanced seal), silicon carbide/silicon carbide, EPDM	-40 to +120
HQQV		O-ring (cartridge) (balanced seal), silicon carbide/silicon carbide, FKM	-20 to +90
HQBE		O-ring (cartridge) (balanced seal), silicon carbide/carbon, EPDM	0 to 120
HQBV		O-ring (cartridge) (balanced seal), silicon carbide/carbon, FKM	0 to 90

Ø28 and Ø36 shaft seals (75-200 kW)

Operating range of standard shaft seals

Standard shaft seal	Motor size [kW]	Description	Liquid temperature [°C]
HQQE	75-200	O-ring (cartridge) (balanced seal), silicon carbide/silicon carbide, EPDM	-40 to +120
HQQV		O-ring (cartridge) (balanced seal), silicon carbide/silicon carbide, FKM	-20 to +90
HQBE		O-ring (cartridge) (balanced seal), silicon carbide/carbon, EPDM	0 to 120
HQBV		O-ring (cartridge) (balanced seal), silicon carbide/carbon, FKM	0 to 90

Maximum inlet pressure

The following table shows the maximum permissible inlet pressure. However, the outlet pressure, that is, the actual inlet pressure plus the pressure generated by the pump, must always remain below the maximum permissible operating pressure.

If the maximum permissible operating pressure is exceeded, the conical bearing in the motor may be damaged and the life of the shaft seal reduced.

Pump type and stages	Maximum inlet pressure [bar]

Examples of operating and inlet pressures

The values for operating and inlet pressures must not be considered individually, and must comply with the below statement.

The outlet pressure must be equal to or lower than the maximum operating pressure.

See the following definitions and examples.

Definitions

Pressure type	Definition
Maximum operating pressure	As stated on the nameplate
Pump differential pressure	The difference between the outlet pressure and inlet pressure
Inlet pressure	The pressure measured at the pump inlet
Outlet pressure	The inlet pressure added to the pump differential pressure

Example 1

Pump, see CR 5 curve:	CR 5-16 A-A-A
Max. operating pressure:	16 bar
Max. inlet pressure:	10 bar
Pump differential pressure:	10.6 bar ²⁸⁾

²⁸⁾ Flow = 0 m³/h

This pump must not be started at an inlet pressure of 10 bar, but only at an inlet pressure of 16.0 minus 10.6, that is, 5.4 bar.

Example 2

Pump, see CR 10 curve:	CR 10-2 A-A-A
Max. operating pressure:	16 bar
Max. inlet pressure:	8 bar
Pump differential pressure:	2 bar ²⁸⁾

²⁸⁾ Flow = 0 m³/h

This pump must not be started at an inlet pressure of 8 bar, as the outlet pressure is lower than the maximum operating pressure. This results in an operating pressure of 8 plus 2, that is, 10 bar.

If the inlet or operating pressure exceeds the pressure permitted, Grundfos variants meeting your specific requirements may be available on request.

9. Selection

Selection of pumps

Base the selection of pumps on the following parameters:

- duty point of the pump
- sizing data, such as pressure loss resulting from height differences, friction loss in the pipes, pump efficiency
- pump materials
- pump connections
- shaft seal.

Duty point of the pump

A pump can be selected for the duty point based on the curve charts in the performance curves and technical data section.

Ideally, the duty point should match the best efficiency on the pump curve.

Grundfos Product Center

We recommend that you size your pump at Grundfos Product Center which is a selection program offered by Grundfos.

Grundfos Product Center features an easy-to-use virtual guide that leads you through the selection of the pump for the application in question.

Sizing data

When sizing a pump, take the following parameters into account:

- required flow rate and pressure at the draw-off point
- pressure loss resulting from height differences (H_{geo})
- best efficiency at the estimated duty point
- NPSH value
- friction loss in the pipes (H_f).

It may be necessary to account for pressure loss in connection with long pipes, bends, valves or similar.

Sizing data

Pos.	Description
1	Required flow rate, required pressure

Pump efficiency

Before determining the best efficiency point, identify the operation pattern of the pump. If you expect the pump to constantly operate at the same duty point, then select a pump that operates at a duty point corresponding to the best efficiency of the pump.

Example of the duty point of a CR pump

Pos.	Description
1	Duty point
2	Best efficiency

As the pump is sized based on the maximum flow rate, the duty point must always lie to the right of the best efficiency point on the efficiency curve (eta). This ensures high efficiency when the flow rate decreases.

Best efficiency

Pos.	Description
1	Best efficiency point

Pump material

Select the material variant based on the pumped liquid. The product range covers the following basic types:

- CR, CRI pumps: for clean, non-aggressive liquids, such as potable water and oils
- CRN pumps: for industrial liquids and acids.

Refer to the section on pumped liquids, or contact Grundfos.

CR pump

Pump connections

Selection of a pump connection depends on the rated pressure and pipes. To meet any requirement, the pumps offer a wide range of flexible connections, such as the following:

- oval flange A (BSP)
- DIN flange
- PJE coupling
- clamp coupling
- union (+GF+)
- other connections on request.

Pump connections

Shaft seal

As standard, the product range is fitted with a Grundfos shaft seal (cartridge type) suitable for the most common applications.

The following key parameters must be taken into account when selecting the shaft seal:

- type of pumped liquid
- liquid temperature

- maximum pressure.

Shaft seal (cartridge type)

We offer a wide range of shaft seal variants to meet specific demands according to the pumped liquid.

Servicing shaft seals

Replacement shaft seals are available as complete service kits ²⁹⁾.

Shaft seals fitted on CR, CRN 125-155 pumps with Ø28 mm or Ø36 mm shaft ends are serviceable. This means that the wear parts in these shaft seals are available as service kits ²⁹⁾ and can be replaced without having to renew the complete shaft seal.

Thrust-handling device

Thrust-handling device

A thrust-handling device (THD) is factory-fitted on pumps with 75 kW motors or larger. The system consists of two parts: a rotating part mounted on the shaft end below the first impeller, and a non-rotating part mounted in or on the pump base.

The THD absorbs the main part of the thrust force generated by the impellers and thereby reduces the resulting axial force the motor bearings must absorb. This enables the use of standard ball bearings in the motor instead of special angular contact ball bearings.

For applications involving CIP (clean-in-place) and motors above 55 kW, use a bearing flange and a base without THD.

²⁹⁾ All service kits include detailed instructions on how to carry out the replacement.

Position numbers for the THD parts

Pos.	Description	Material
120a	Thrust disc	Stainless steel
120b	Rotating ring	Silicon carbide
120g	Stationary ring	Silicon carbide ³⁰⁾ Tungsten carbide
120h	Lifting plate	Stainless steel
-	O-rings	EPDM FKM

³⁰⁾ On request for CRN

Operating pressure and inlet pressure

Do not exceed the limit for the following:

- maximum operating pressure
- maximum inlet pressure.

Minimum inlet pressure, NPSH

We recommend calculating the inlet pressure H in the following situations:

- The liquid temperature is high.
- The flow rate is significantly higher than the rated flow.
- Water is drawn from depths.
- Water is drawn through long pipes.
- The inlet conditions are poor.

To avoid cavitation, make sure minimum pressure is ensured on the inlet side of the pump.

The maximum suction lift H in metres head can be calculated as follows:

H	$p_b \times 10.2 - \text{NPSH} - H_f - H_v$
p_b	Barometric pressure in bar: • It can be set to 1 bar at sea level. • In closed systems, it indicates the system pressure in bar.
NPSH	Net Positive Suction Head in metres head to be read from the NPSH curve at the highest flow rate the pump would be delivering
H_f	Friction loss in the inlet pipe in metres head at the highest flow rate the pump would be delivering
H_v	Vapour pressure in metres head to be read from the vapour pressure scale (contingent on the liquid temperature t_m)

If the calculated H is positive, the pump can operate at a suction lift of maximum H metres head.

If the calculated H is negative, an inlet pressure of minimum H metres head is required.

Minimum inlet pressure, NPSH

To avoid cavitation, never select a pump with a duty point too far to the right on the NPSH curve.

Always check the NPSH value of the pump at the highest possible flow rate.

TM027439

How to read the curve charts

TM078855

Pos.	Description
1	It shows the pump type, frequency, poles or speed as well as the ISO or ANSI standard.
2	The first figure indicates the number of stages, while the second figure indicates the number of reduced-diameter impellers.
3	It is the QH-curve of the individual pump with the bold curves indicating the recommended duty range for best efficiency.
4	The power curves indicate pump input power per stage . Curves are shown for full (1/1) and for reduced-diameter (2/3) impellers.
5	The eta curve shows the efficiency of a pump with an average number of stages. The efficiency of pumps with reduced-diameter impellers is approximately 2 % lower than the eta curve shown in the chart.
6	It is the QH for each individual impeller. Curves are shown for full (1/1) and for reduced-diameter (2/3) impellers.
7	The NPSH curve is a maximum curve for all the variants shown.

Guidelines to performance curves

The guidelines below apply to the performance curves:

- Tolerances refer to the ANSI or ISO standards, such as ISO 9906:2012, Grade 3B, if indicated on the curve chart.
- The motors used for the measurements are standard Grundfos-specified motors.
- Measurements are completed with airless water at a temperature of 20 °C.
- The curves apply to the following kinematic viscosity:
 $\nu = 1 \text{ mm}^2/\text{s}$ (1 cSt).
- Due to risk of overheating, the pumps must not be used at a flow rate below the minimum.
- The QH-curves apply to a rated motor speed of a three-phase mains-operated motor. For realistic curves, go to Grundfos Product Center at <http://product-selection.grundfos.com>, and insert data.

The curve below shows the minimum flow rate as a percentage of the rated flow rate in relation to the liquid temperature. The dotted line shows a CRN pump fitted with an air-cooled top assembly.

Minimum flow rate

12. List of pumped liquids

A number of typical liquids are listed below.

Other pump versions may be applicable, but those listed are considered the preferred options.

The table is intended as a general guide only, and cannot replace actual testing of the pumped liquids and pump materials under specific working conditions.

Therefore, use the list with reservation. Factors such as those mentioned below may affect the chemical resistance of a specific pump version:

- concentration of the pumped liquid
- liquid temperature
- pressure.

Take safety precautions when pumping dangerous liquids.

Notes

D	It refers to liquid often containing additives.
E	Its density or viscosity differ from that of water. Factor it in when calculating motor output and pump performance.
F	Pump selection depends on many factors. Contact Grundfos.
H	There is a risk of crystallisation/precipitation in the shaft seal.
1	It indicates highly flammable liquid.
2	It indicates combustible liquid.
3	It indicates that it is insoluble in water.
4	It indicates low self-ignition point.

Pumped liquid	Chemical formula	Note	Liquid concentration, liquid temperature	CR	CRN
Acetic acid	CH ₃ COOH	-	5 %, 20 °C	-	HQQE
Acetone	CH ₃ COCH ₃	1, F	100 %, 20 °C	-	HQQE

LiqTec

The LiqTec dry-running protection unit protects the pump and process against dry running and temperatures exceeding 130 ± 5 °C. When connected to the motor PTC sensor, LiqTec also monitors the motor temperature.

LiqTec is prepared for DIN-rail mounting in control cabinets.

Enclosure class: IPX0.

Note that all sensors have 4-20 mA signal output.

Grundfos pressure sensor kits

Content	Liquid temperature	Pressure [bar]	Product number
Grundfos pressure transmitter, type ISP44, with 2.5 m cable. Connection: G 1/2 A (DIN 16288 - B6kt) Quick guide	-40 to +100 °C ³⁷⁾	0-4	92618271
		0-6	92652122
		0-10	92652150
		0-16	92652152
		0-25	92618276

³⁷⁾ Liquid temperature ranges from -40 to +130 °C at ambient temperatures up to 25 °C.

DPI differential-pressure sensor kit

Content	Pressure [bar]	Product number
1 sensor incl. 0.9 m screened cable (7/16" connections)	0 - 0.6	96611522
1 original DPI bracket for wall mounting	0 - 1.0	96611523
1 Grundfos bracket for mounting on motor	0 - 1.6	96611524
2 M4 screws for mounting of sensor on bracket	0 - 2.5	96611525
1 M6 screw (self-cutting) for mounting on MGE 90/100	0 - 4.0	96611526
1 M8 screw (self-cutting) for mounting on MGE 112/132	0 - 6.0	96611527
3 capillary tubes (short/long)	0-10	96611550
2 fittings (1/4" - 7/16")		
5 cable clips (black)		
Installation and operating instructions (00480675)		
Service kit instructions		

Adapter kit

Adapter kit for sensor		
Content	Type	Product number
Adapter for sensor	G 1/2 EPDM	99352712
	G 1/2 FKM	99352737

³⁸⁾ It applies to the CRN 95.

14. Variants

The variants are available on request.

Although the Grundfos CR, CRI, CRN product range offers a number of pumps for different applications, customers require specific pump solutions to satisfy their needs. See the following documents:

- Grundfos CR Custom-built pumps data booklet
- Grundfos CR, CRN high pressure data booklet.

Find below the range of options available for customizing the CR pumps to meet the customers' demands.

Contact Grundfos for further information or for requests other than the ones mentioned below.

Motors

Variant	Description
ATEX-approved motor	For operation in hazardous atmospheres, explosion-proof or dust-ignition-proof motors may be required.
Motor with anti-condensation heating unit	For operation in humid environments, motors with built-in anti-condensation heating unit may be required.
Motor with thermal protection	We offer motors with built-in bimetallic thermal switches or temperature-controlled PTC sensors (thermistors) incorporated in the motor windings.
Oversize motor	Ambient temperatures above 40 °C or installation at altitudes of over 1000 metres above sea level require the use of an oversize motor, that is, derating.
4-pole motor	We offer 4-pole standard motors.

Shaft seals

Variant	Description
Shaft seal with FFKM O-ring	We recommend shaft seals with FFKM or FXM O-ring for applications where the pumped liquid may damage the standard O-ring material.
Seal with flush, quench seal	We recommend this for applications involving crystallizing, hardening or sticky liquids.
Air-cooled shaft seal system	We recommend this for applications involving extremely high temperatures. No conventional mechanical shaft seal can withstand liquid temperatures of up to 180 °C for any length of time. For such applications, the unique Grundfos air-cooled shaft seal system is recommended. To ensure a low liquid temperature around the standard shaft seal, the pump is fitted with a special air-cooled shaft seal chamber. No separate cooling is required.
Double seal with pressure chamber	We recommend this for applications involving poisonous or explosive liquids. It protects the surrounding environment and the people working in the vicinity of the pump. It consists of two seals mounted in a back-to-back arrangement within a separate pressure seal chamber. As the pressure in the chamber exceeds the pump pressure, leakage is prevented. The seal chamber pressure is generated by a dosing pump or a special pressure intensifier.
CR MAGdrive	These are magnetically driven pumps for industrial applications. Key applications are industrial processes involving the handling of aggressive, environmental, dangerous or volatile liquids, such as organic compounds and solvents.

Pumps

Variant	Description
Horizontally mounted pump	For safety or height reasons, certain applications, for instance on ships, require the pump to be mounted in horizontal position. For easy installation, the pump is fitted with brackets that support the motor and the pump.
Low-temperature pump	Exposed to temperatures down to -40 °C, coolant pumps may require neck rings with a different diameter to prevent impeller drag.
High-pressure pump up to 47 bar	For high-pressure applications, we offer a unique double pump system capable of generating a pressure of up to 47 bar.
Low-NPSH pump (improved suction)	We recommend this for boiler-feed applications where cavitation may occur due to poor inlet conditions.
Pump with bearing flange	The bearing flange is suitable for applications where the inlet pressure is higher than the maximum pressure recommended. The bearing flange increases the life of motor bearings. We recommend this for standard motors.
Belt-driven pump	Belt-driven pumps are designed to operate in places with limited space or where no electrical power is available.
Pump for pharmaceutical and biotechnological applications	CRN pumps are designed for applications requiring the sterilisation and CIP (clean-in-place) capability of pipes, valves and pumps.

Connections and other variants

Variant	Description
Pipe connections	In addition to the wide range of standard flange connections, a 16-bar DIN standard clamping flange is available. Customized flanges are available according to specifications.
TriClamp connection	TriClamp connections provide a hygienic, sanitary coupling for pharmaceutical and food applications.
Electropolished pump	Electropolished pumps substantially reduce the risk of corrosion of materials. We recommend this for applications in the pharmaceutical and food industry.

15. Grundfos Product Center

Online search and sizing tool to help you make the right choice.

From the international view, you can select your specific country to view the product range available to you.

International view: <https://product-selection.grundfos.com>

All the information you need in one place

Performance curves, technical specifications, pictures, dimensional drawings, motor curves, wiring diagrams, spare parts, service kits, 3D drawings, documents, system parts. The Product Center displays any recent and saved items - including complete projects - right on the main page.

Downloads

On the product pages, you can download installation and operating instructions, data booklets, service instructions, etc., in PDF format.

When you select your country, you see the menus below. Note that some menus may not be available depending on the country.

Example: <https://product-selection.grundfos.com/uk>

Pos.	Description
1	Products & services enables you to find products and documents by typing a product number or name into the search field.
2	Applications enables you to choose an application to see how Grundfos can help you design and optimize your system.
3	Products A-Z enables you to look through a list of all the Grundfos products.
4	Categories enables you to look for a product category.
5	Liquids enables you to find pumps designed for aggressive, flammable or other special liquids.
6	Product replacement enables you to find a suitable replacement.
7	WWW enables you to select the country, which changes the language, the available product range and the structure of the website.
8	Sizing enables you to size a product based on your application and operating conditions.
